

3.1 A New Transformation

A transformation not encountered at GCSE level is that of inversion.

Given a function, $f(x)$, the inversion of this function is $\frac{1}{f(x)}$.

Although not recommended, this could be written as $[f(x)]^{-1}$ but notice that, in general, this is not the same as $f^{-1}(x)$ which is the inverse function.

Inversion

The transformation inversion is the taking of the reciprocal of a given function.

Under inversion, $f(x) \rightarrow \frac{1}{f(x)}$

3.2 Example (Sine Function)

On the graph below, in red, is the familiar sine function, $f(x) = \sin x$ and, in

gold, the inversion of this function $\frac{1}{f(x)} = \frac{1}{\sin x}$

Notice that,

- as the reciprocal of ± 1 is also ± 1 , points on the lines $y = \pm 1$ are invariant.
- the inversion has a vertical asymptote each time the sine function is zero.

👉 Draw in the vertical asymptotes on the graph.

[1 mark]

3.3 Example (Power Function)

The power function, $f(x) = x^n$ has inversion, $\frac{1}{f(x)} = \frac{1}{x^n}$

$$n = 1 : y = x : y = \frac{1}{x}$$

$$n = 2 : y = x^2 : y = \frac{1}{x^2}$$

$$n = 3 : y = x^3 : y = \frac{1}{x^3}$$

3.4 Exercise

*Any solution based entirely on graphical
or numerical methods is not acceptable*

Marks Available : 72

Question 1

A-Level C1 Examination Question from May 2014, Q4

The diagram shows a sketch of the curve C with equation

$$y = \frac{1}{x} + 1 \quad x \neq 0$$

The curve C crosses the x -axis at the point A .

- (a) State the x coordinate of the point A .

[1 mark]

The curve D has equation $y = x^2(x - 2)$ for all real values of x .

- (b) Add a sketch of curve D to the diagram, above.
Show the coordinates of each point where the curve D crosses the axes.

[3 marks]

- (c) Using your sketch, state, giving a reason, the number of real solutions to the equation

$$x^2(x - 2) = \frac{1}{x} + 1$$

[1 mark]

Question 2

A-Level Examination Question from January 2009, Paper C1, Q8 (Edexcel)

The point $P(1, a)$ lies on the curve with equation

$$y = (x + 1)^2(2 - x)$$

- (a) Find the value of a

[1 mark]

- (b) On the axes below sketch the curves with the following equations;

(i) $y = (x + 1)^2(2 - x)$ (ii) $y = \frac{2}{x}$

On your diagram show clearly the coordinates of any points at which the curves meet the axes.

[5 marks]

- (c) With reference to your diagram in part (b) state the number of real solutions to the equation

$$(x + 1)^2(2 - x) = \frac{2}{x}$$

[1 mark]

Question 3

Graphed is the inversion of the sine function, $f(x) = \sin x \rightarrow \frac{1}{f(x)} = \frac{1}{\sin x}$

Produce similar graphs for the inversion for,

- (i) the cosine function, $f(x) = \cos x \rightarrow \frac{1}{f(x)} = \frac{1}{\cos x}$
- (ii) the tangent function, $f(x) = \tan x \rightarrow \frac{1}{f(x)} = \frac{1}{\tan x}$

These inversions have names, $\frac{1}{\sin x} = \csc x$, $\frac{1}{\cos x} = \sec x$, $\frac{1}{\tan x} = \cot x$

[3, 3 marks]

Question 4

For the curve with equation

$$y = (x - 1)^2 - 16$$

- (i) write down the coordinates of the minimum point,

[1 mark]

- (ii) expand the brackets, and hence write down the coordinates of where the curve crosses the y-axis,

[1 mark]

- (iii) factorise your part (ii) answer, and hence write down the coordinates of where the curve crosses the x-axis.

[1 mark]

- (iv) Sketch the curve.

[2 marks]

Question 5

For the curve with equation

$$y = (x - 4)^2 + 1$$

explain, using mathematics, why it does not cross the x-axis.

[2 marks]

Question 6

A-Level Examination Question from January 2011, Paper C1, Q10 (Edexcel)

(a) Sketch the graphs of

$$\textbf{(i)} \quad y = x (x + 2) (3 - x) \qquad \textbf{(ii)} \quad y = - \frac{2}{x}$$

Show clearly the coordinates of all points where the curves cross the coordinate axes.

[6 marks]

(b) Using your sketch state, giving a reason, the number of real solutions to the equation

$$x (x + 2) (3 - x) = - \frac{2}{x}$$

[2 marks]

Question 7

A-level Examination Question from January 2006, Paper C1, Q10 (Edexcel)

$$x^2 + 2x + 3 \equiv (x + a)^2 + b$$

- (a) Find the values of the constants a and b

[2 marks]

- (b) In the space provided below, sketch the graph of

$$y = x^2 + 2x + 3$$

Indicate clearly the coordinates of any intersections with the coordinate axes.

[3 marks]

- (c) Find the value of the discriminant of $x^2 + 2x + 3$
Explain how the sign of the discriminant relates to your sketch in part (b)

[2 marks]

The equation $x^2 + kx + 3 = 0$, where k is a constant, has no real roots.

- (d) Find the set of possible values of k , giving your answer in surd form.

[4 marks]

Question 8

A-level Examination Question from January 2005, Paper C1, Q10

Given that

$$f(x) = x^2 - 6x + 18, \quad x \geq 0$$

- (a) express $f(x)$ in the form $(x - a)^2 + b$, where a and b are integers.

[3 marks]

The curve C with equation $y = f(x)$, $x \geq 0$, meets the y -axis at P and has a minimum point at Q

- (b) Sketch the graph of C , showing the coordinates of P and Q

[4 marks]

The line $y = 41$ meets C at the point R

- (c) Find the coordinates of R , giving your answer in the form $p + q\sqrt{2}$ where p and q are integers.

[5 marks]

Question 9

A-Level Examination Question from May 2010, Paper C1, Q10 (Edexcel)

(a) On the same axes sketch the graphs of the curves with equations

(i) $y = x(4 - x)$ **(ii)** $y = x^2(7 - x)$

showing clearly the coordinates of the points where the curves cross the coordinate axes.

[5 marks]

(b) Show that the x -coordinate of the points of intersection of

$$y = x(4 - x) \quad \text{and} \quad y = x^2(7 - x)$$

are given by the solutions to the equation

$$x(x^2 - 8x + 4) = 0$$

[3 marks]

The point A lies on both the curve and the x and y coordinate of A are both positive.

(c) Find the exact coordinates of A , leaving your answer in the form

$$(p + q\sqrt{3}, r + s\sqrt{3})$$

where p, q, r and s are integers.
